CLEAN ENERGY TOURS

Driving this clean energy transformation are the **Port Kembla Hydrogen Hub** and **Renewable Energy Zone (REZ)** being facilitated by the NSW Government, with over \$700 million in major energy projects.

The **Clean Energy Tours** feature Australia's first heavy vehicle hydrogen refueling station that is enabling a range of zero emissions trials for trucks and buses, powered by hydrogen produced at Port Kembla from recycled water and renewable energy.

During the tour you will learn about;

- Renewable energy generated by offshore wind farms.
- Australia's first gas importation terminal being built at Port Kembla that will supply up to 70 percent of the State's gas needs and help power the region's fleet of dual fuel hydrogen capable power stations.
- BlueScope major projects working towards a reduction in Greenhouse Gas Emissions.
